

# HOW TO DIVIDE A CIRCLE INTO 3 PARTS

Michele Faia

1. Divide paper in half. Draw line AB lightly.
2. Draw a circle in the center of your paper. The size is your choice.
3. Place the point of your compass at #1, and with the same radius as your circle in the center divide the circle into 6. Make a tick where your compass crosses the circle as in 1, 2, 3, 4, 5, 6.
4. Place compass point on #2 and draw a semi-circle between #1 and #3.
5. Place compass point on #4 and draw a semi-circle between #3 and #5.
6. Place compass point on #6 and draw a semi-circle between #5 and #1.
7. If you want to extend your drawing, draw full circles with compass points at #2, #4 and #6, as in the examples with dotted lines.
8. ERASE lines AB.
9. If you would like, draw a circle around the 3 circles. (over)
